

Department of Public Utilities

Interconnection Check List

1. Familiarize yourself with the interconnection application and agreement. This describes the interconnection process.
2. Once you have decided to proceed with an interconnection, complete and return the **Application to Interconnect Small Generator 20 kW or Less** for residential or 50 kW or less for non-residential to the Department of Public Utilities (DPU). As part of the application process, a plan must be submitted to DPU that contains the Electric design, interconnection requirements, size and operation plan and the appropriate application fee. As a part of the interconnection analysis performed by DPU, the applicant will be provided with an estimate of any line extension or other cost to be incurred in providing electric delivery service to the applicant's facility.
3. Upon notification of approval of Interconnection Application from DPU, please complete and return the **Interconnection Agreement**, provide proof of liability insurance coverage, and submit payment for facilities charges to DPU if required.
4. After construction of the DG system is complete, and after you have received the final electrical inspection from the local building codes authority, please contact DPU for an interconnection approval inspection. **Please do not close, or allow your electrician / installer to close, (place in the "on" position) the lockable disconnect switch until DPU has conducted its safety inspection of the installation.**
5. After the interconnection has passed DPU's inspection and all requirements have been satisfied, DPU will authorize commencement of interconnected operations. **DPU will return a signed Interconnection Agreement.**
6. Once the Interconnection application is complete, the customer may elect to sign up for DPU's Net Metering Rider Rate. Please see our customer service representatives for details.
